A group here have come across some Commodore Pets, the 8032 and 9000 SuperPet, with no documentation. Can these be used for Packet? Any information on port pin outs, memory maps, schematics or manuals would be appreciated.

I'm new to packet and don't know how to recognize what is appropriate. There is a local station that sends unconnected packets with an occasional message imploring people to pray for and condemn the "slaughter of the unborn" in a reference to abortion.

Is this sort of thing legal? Does the FCC allow packet broadcasting or look the other way? The other station contends that since the message isn't obscene he has a right to send it. Is packet on the regulatory frontier or do I need a new license manual?

Thanks!

jeffrey N0IRR

In the UK, that's definitely extremely illegal, the use of amateur radio for political and religious purposes is expressly forbidden. It damn well should be in the US as well, but owing to all the flag-wavers shouting 'First Amendment' all the time and whining about rights, it probably isn't.

Sorry for minor flame, but use of packet for that sort of thing annoys me no end. That's not what amateur radio is for. It's on the same line as in the UK, some stations contending that they have a right to send whatever they want over the network because they have a license - which is of course wrong, as the wonderful network we have is all courtesy of the operators who allow others to use their equipment. Talking about having a 'right' to do with other people's equipment exactly what you wish, er, also annoys me no end. Ho hum.

Gosh, I am a bad-tempered sod..

Same in Australia too. It would also be classed as "broadcasting" (which is also illegal), but I guess you could get around that by setting your UNPROTO to "CQ" ...

I don't know why some people have to be obnoxious about their "right" to "free speech", whatever that is.

Subject: NET/Mac 2.3.19 or 2.3.20 ?  
To: packet-radio@ucsd.edu

I'm trying to get hold of the latest version of NET/Mac. On ucsd.edu there is a patcher program which will take version 2.3.19 to 2.3.20 but the latest version that appears to be available anywhere on the Internet (according to Archie) is 2.3.15. So does anyone have either version 2.3.19 or 2.3.20 that they could e-mail to me, or alternatively a pointer to an FTP site where I can get either of these versions ?

Thanks,

//Paul (G4BWQ)
